<Assignment 6 – Readme File>

Ashley Junghee Koo

"Psalm|Life Journey" is an interactive website that shows unique way of animated interactions with visual contents such as illustrations and texts. I focused on the animated interactions on the home screen and built on overall structure of the website layout. I couldn't implement detailed animation interactions on the secondary poem season pages due to lack of time.

<< Key Feature
- Mouse wheel or Click triggered animations
- Full screen center alignment with no-scroll
- Animated SideNav screen and full screen
- Animated Wheel contents
- Two pages' link
- Different timing of overlaying illustration DIVs with animated contents
- Responsive design of small / large screen for web desktop screen
  Including Sidenav, full screen navigation screen, main home screen layout

<< Translated works from the feedback of Assignment 5
- Do not show repeated titles of different season inside the wheel contents
- Interesting way of animated interactions triggered by mouse wheel, click, touch pad event
- Different timings of layered illustration Divs
- Modify the contents of About
- Poem content pages should represent what it describes in About
- Delete letter animations
- Too much work to promise => simplify and work on big frame works first and then add on details step by step

<< How to view prototype
** Run index.html
Top Menu> About / Social button(toggle) / Full screen poem collection button
Center Contents> Wheel contents triggered by mouse wheel or click or touchpad
Try scale down to see the responsive design
** Go to Poem_Winter.html by clicking Right Arrow button inside Wheel inside contents
Try scale down to see the responsive design
Try mouse wheel or touchpad down events
